PROFESSIONAL SUMMARY

“A Spiritual Journey from a Single Bamboo to a Thriving Bamboo Grove”

“

He has received several prestigious awards, including:

Mukoddas Syuhada was born in Serang on October 28, 1976. He spent his educational years in Bandung, graduating with a Bachelor of Architecture from Institut Teknologi Bandung (ITB) in 2001, and became one of the initiators of the Indonesian Institute of Architects (IAI) Banten Chapter. In 2007, he obtained the Intermediate Architect certification, and in 2008 established an environmentally friendly village, Tapak Bumi Village, in the coastal area of Karangantu.

In early 2010, he earned his Master of Engineering (M.T.) from Universitas Pelita Harapan (UPH). In 2011, he founded the Banten Creative Community (BCC), an NGO focused on creative economy and community empowerment. In 2012, he organized a Bamboo Workshop in South Tangerang, successfully gathering bamboo activists to strengthen the Nusantara Bamboo Community.

From 2013 until now, he has continuously promoted the "One Bamboo Revolution" to achieve sovereignty and resilience in housing, food, clothing, defense, security, education, health, energy, and environment. From 2015 to 2019, he served as Chairman of IAI Banten.

Awards Matrix

★ Ganesa Widya Jasa Adiutama (ITB, 2016)

★ MDGs Finalist in Education, Sanitation, and Environment (UKP4, 2014)

★ Inspiring Young Leader – Pejuang 9 Bintang (Sampoerna Foundation, 2010)

PROFILE/MISSION

He is an architect and bamboo development practitioner with more than 15 years of experience in bamboo construction, bamboo-based economic development, and sustainable community development in Indonesia.

Founder of Yayasan Sabumi Nusantara Jaya, he leads various bamboo ecosystem initiatives integrating bamboo agroforestry, sustainable construction, eco-tourism villages, and community-based bamboo economy development.

He has extensive experience in developing bamboo value chain models connecting bamboo cultivation, processing, construction, and local economic development based on sustainable natural resources.

He has a strong interest in developing nature-based solutions for climate change mitigation, green economy development, and strengthening rural livelihoods.

CORE EXPERTISE

Bamboo Value Chain Development

Bamboo Agroforestry

Sustainable Bamboo Construction

Bamboo-Based Circular Economy

Community-Based Natural Resource Development

Eco-Village Planning

Environmentally Friendly Building Materials

Bamboo Product Development

Sustainable Architecture

Green Infrastructure Development

III. PROFESSIONAL EXPERIENCE

1. Founder – YSNJ

Yayasan Sabumi Nusantara Jaya, Indonesia | 2023 – Present

The foundation was formally established on August 18, 2023, in Serang, consolidating field experience, community networks, and technological innovation into an integrated bamboo ecosystem.

YSNJ also developed a digital innovation platform (web3.bambu.co.id) integrating:

- bamboo planting
- blockchain
- smart contracts

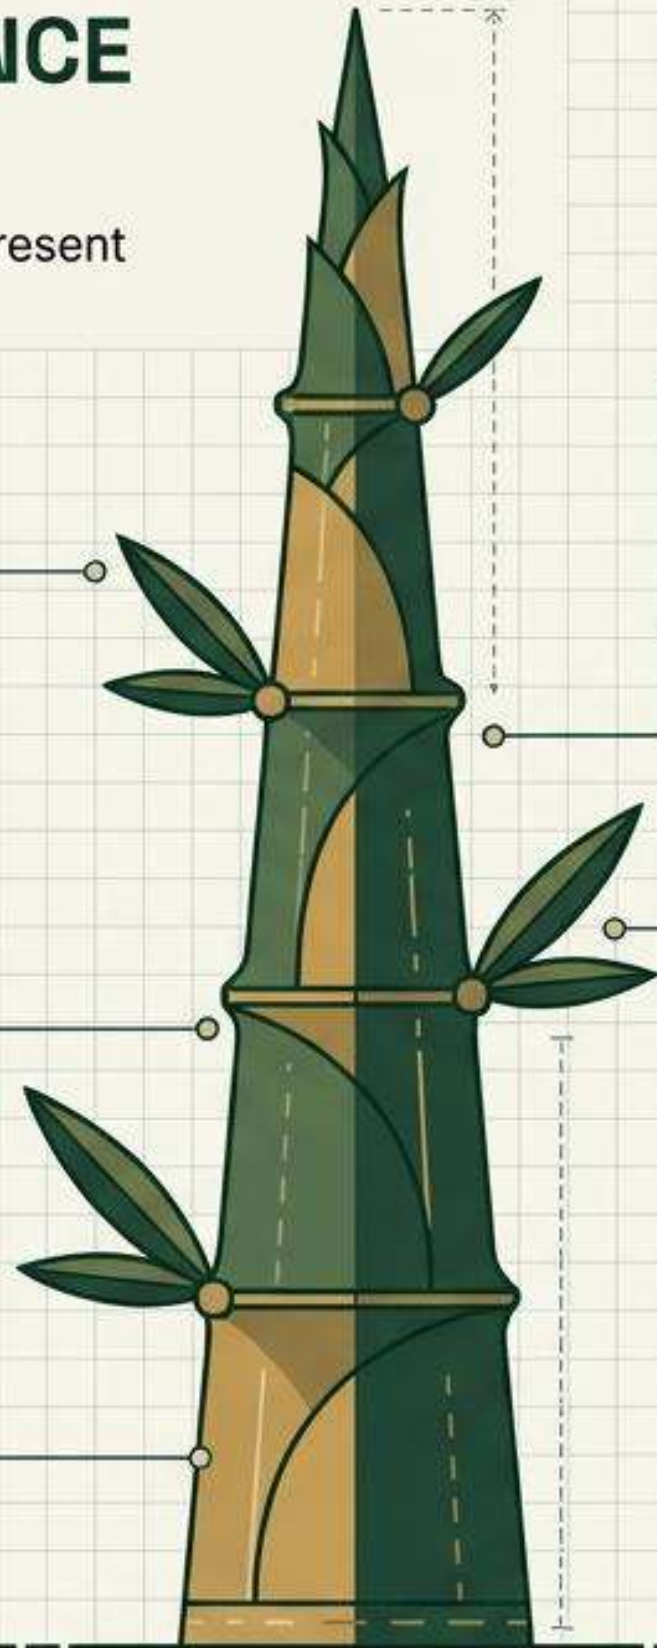

The journey expanded with the establishment of **Banten Creative Community (BCC)**, followed by:

- **Bamboo Workshop** (2012)
- **Nusantara Bamboo Community**
- **Akademi Bambu Nusantara** (2015)
- **PERPUBI** (2018)

Yayasan Sabumi Nusantara Jaya is a non-profit organization rooted in a long journey of environmental awareness and community empowerment based on bamboo.

This initiative began in 2008 with the development of **Tapak Bumi Village**, an eco-village in the coastal area of Banten Bay, Karangantu, serving as an early space for environmental conservation and community-based education.

Bamboo Planting Experience (2012–2024)

16

planting locations
across Indonesia

±30,050

bamboo
seedlings

±135

hectares
of land

Digital Bamboo Planting Innovation (2024)

3,250

bamboo seedlings

participation &
transparency

TVET & Sustainability

Experience includes:

- bamboo database development
- nursery and planting
- technical training
- digital innovation

**2. Chairman – PERPUBI:
Indonesian Bamboo Business
Association | 2023 – Present.**

Main activities: business and product development, training and capacity building, research and innovation, promotion and exhibitions, collaboration with government and universities

**3. Member – PKR B3BI:
Bamboo Biomass &
Bioproduct Research Center
| 2023 – Present.**

Main activities: research coordination, industry visits, national & international collaboration

**4. Founder – Akademi
Bambu Nusantara (ABN):
2015 – Present.**

Main activities: training and workshops, research coordination, education programs

**5. Advisor to Mayor
(Economy, Development &
Finance): South Tangerang
City | 2025 – Present.**

Responsibilities: policy analysis, strategic recommendations, development evaluation, investment advisory

**6. Bamboo Construction
Consultant: 2008 – Present.**

Scope: bamboo architecture, modular systems, eco-tourism design

**7. Research Team –
Universitas Indonesia:
2023 – 2025.**

Thermal Performance of Bio-Based Phase Change Material Encapsulated in a Bamboo Wall for Housing: A Field Experiment in a Highland Area | 2023 – 2025

**8. BSN Technical
Committee Member:
2019 – 2025**

**9. Chairman – IAI Banten:
2015 – 2019**

IV. NUSANTARA BAMBOO ECOSYSTEM INITIATIVE

Every house → Bamboo cluster | Every village → Bamboo forest | Every district → Bamboo academy
Every city → Bamboo village | Every province → Bamboo R&D center | Every island → Bamboo industry

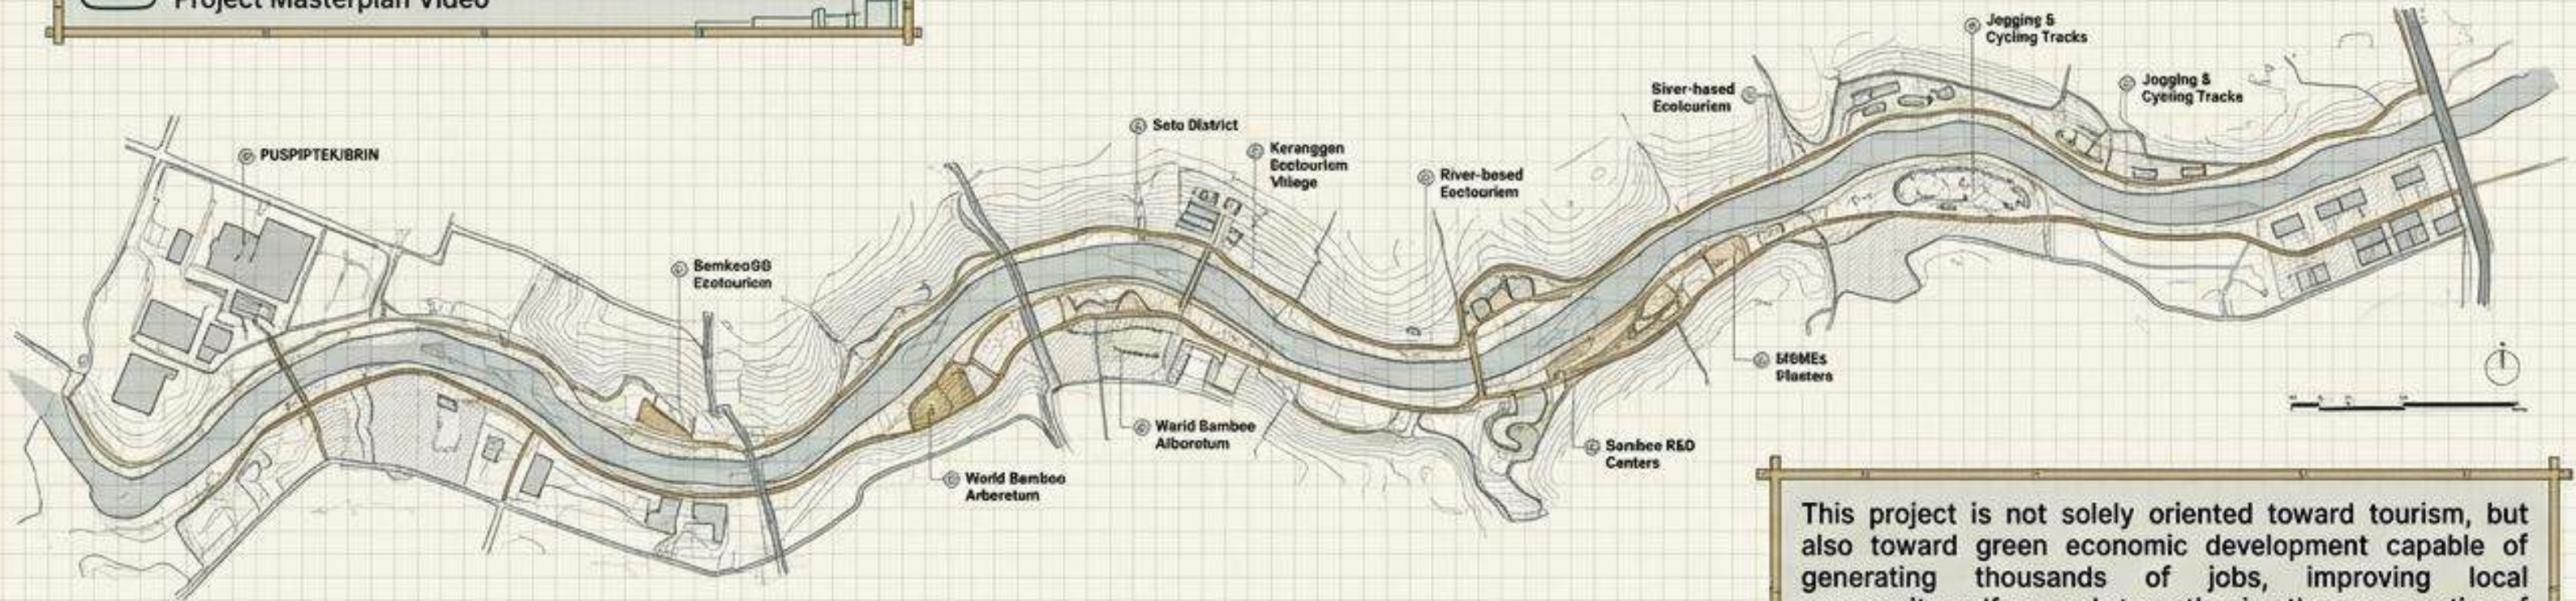

V. KEY PROJECTS (PORTFOLIO)

1. Cisadane Eco Adventure Park (2025 – 2026)

A 20 KM Bamboo-Based Ecotourism, Research, and Economic Corridor

<https://youtu.be/oFQ13kV6hGQ?si=mjumoUYEFXKRom5t>
Project Masterplan Video

Cisadane Eco Adventure Park (CEAP) is an initiative to develop an approximately 20-kilometer river corridor along the Cisadane River, integrating environmental conservation, bamboo innovation, community-based economy, and eco-based tourism. This project is initiated by Yayasan Sabumi Nusantara Jaya (YSNJ) as part of a broader vision to build a sustainable bamboo civilization in the Nusantara.

The CEAP corridor connects several strategic zones in the Setu District and its surrounding areas, ranging from the national research complex PUSPIPTEK/BRIN to the Keranggan Ecotourism Village. Within this corridor, various facilities will be developed, including the World Bamboo Arboretum, Akademi Bambu Nusantara, bamboo research and development centers, river ecotourism areas, cycling and jogging tracks along the river, as well as clusters of MSMEs and environmentally friendly bamboo industries.

This project is not solely oriented toward tourism, but also toward green economic development capable of generating thousands of jobs, improving local community welfare, and strengthening the conservation of the Cisadane River ecosystem. Through the utilization of bamboo as a primary material and a sustainable economic commodity, CEAP also contributes to climate change mitigation through carbon sequestration and riparian ecosystem restoration.

CEAP is envisioned to become Indonesia's first bamboo-based river economic corridor model, as well as a national and international hub for bamboo innovation and education. Towards a greener, more sustainable, and resilient future through the power of Nusantara bamboo.

2. Integrated Bamboo Industry Feasibility Study (2025 – 2026)

Feasibility Matrix

Feasibility Study Overview:

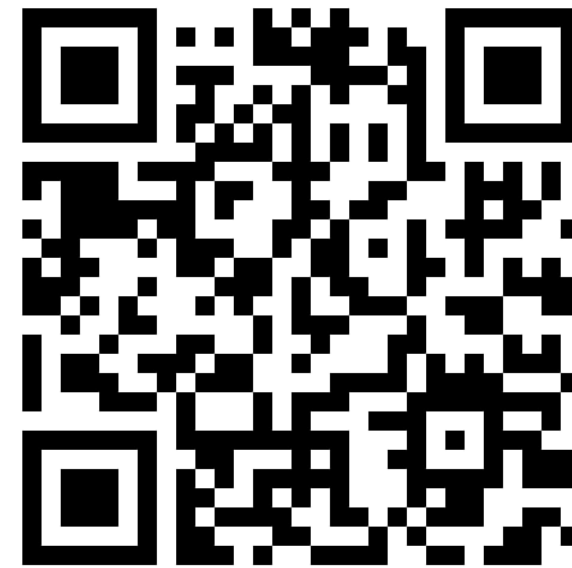

This Feasibility Study (FS) has been developed as a foundation for planning, decision-making, and implementation preparation of an Integrated Bamboo Industry, focusing on: laminated bamboo, modular blockbamboo, bamboo textiles.

The project is located in the Greater Tangerang area, with a primary focus on industrial zones in Tangerang Regency, supported by surrounding ecosystem areas including South Tangerang City.

Main Objectives of the Study

The primary objective of this study is to assess: technical feasibility, financial feasibility, environmental feasibility, social feasibility, institutional feasibility, of developing a downstream-oriented bamboo industry. In addition, the study aims to formulate a sustainable, inclusive, and competitive business model and governance system.

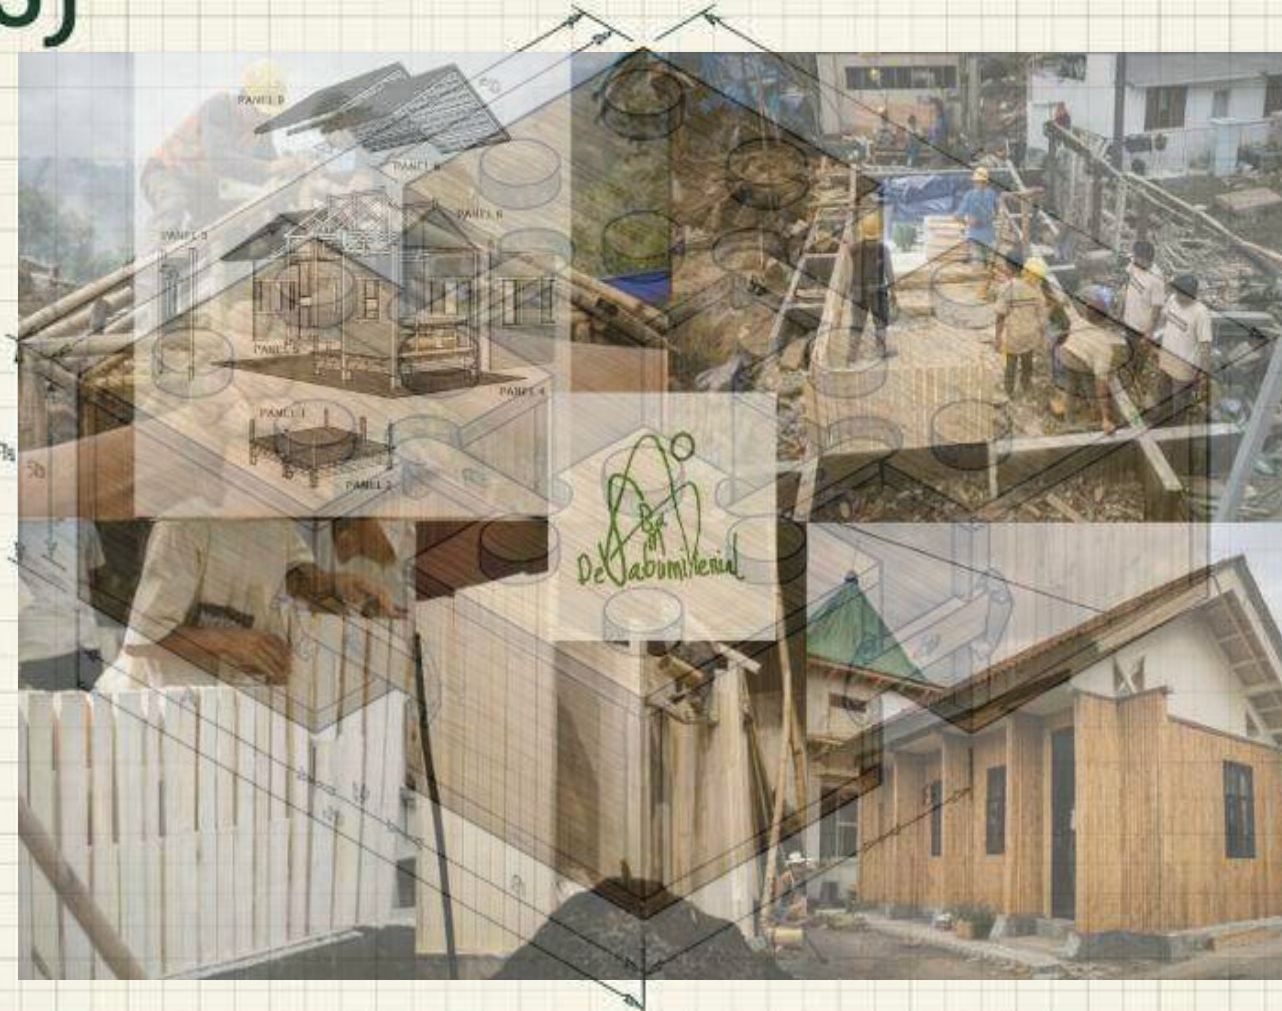

Media Archive

3. Knockdown and Modular BlockBamboo Construction System (2020 – 2025)

Development of a modular bamboo structural system designed for:

- sustainable housing,
- climate-resilient construction,
- buildings based on renewable materials

System advantages:

- modular design,
- environmentally friendly materials, adaptable for community-based development, suitable for rural infrastructure and eco-tourism development

Instructional Video Series

5. Green Gold Bamboo Plantation – Cibarani, Lebak, Banten (2024 – ...)

The Green Gold Bamboo Plantation in Cibarani is a community-based bamboo ecosystem initiative rooted in indigenous communities, launched on December 28, 2024, in Kasepuhan Cibarani, Lebak Regency, Banten, covering an area of approximately 490 hectares.

This program will be gradually expanded across the Halimun Mountain region, Kendeng/wewengkon Kanekes, and the Kasepuhan Banten Kidul areas, with land potential reaching hundreds of thousands of hectares.

The main target of this program is to plant 2 million bamboo seedlings as Indonesia's "Green Gold," serving dual functions: providing sustainable raw materials for laminated bamboo boards, modular blockbamboo construction, textiles, furniture, and bamboo-based industries, acting as an ecological buffer zone to protect indigenous and protected forests from illegal logging and illegal gold mining activities

This plantation fully involves indigenous communities as the main actors in the field, from nursery development, planting, maintenance, to sustainable harvesting, and is professionally managed by Yayasan Sabumi Nusantara Jaya as the ecosystem manager.

This program is expected to become a national model for bamboo management, integrating environmental protection, indigenous sovereignty, and green economic development.

7. BaMbuCrypto (BMC)

BAMBUCRYPTO (BMC) INITIATIVE

BAMBUCRYPTO (BMC) is a conceptual initiative aimed at transforming Nusantara civilization through the digitalization of all aspects of bamboo ecosystem preservation, utilization, and development.

BMC is defined as a digital asset utilizing blockchain technology and smart contracts. All transactions and operational processes are conducted via internet-based systems using smartphones.

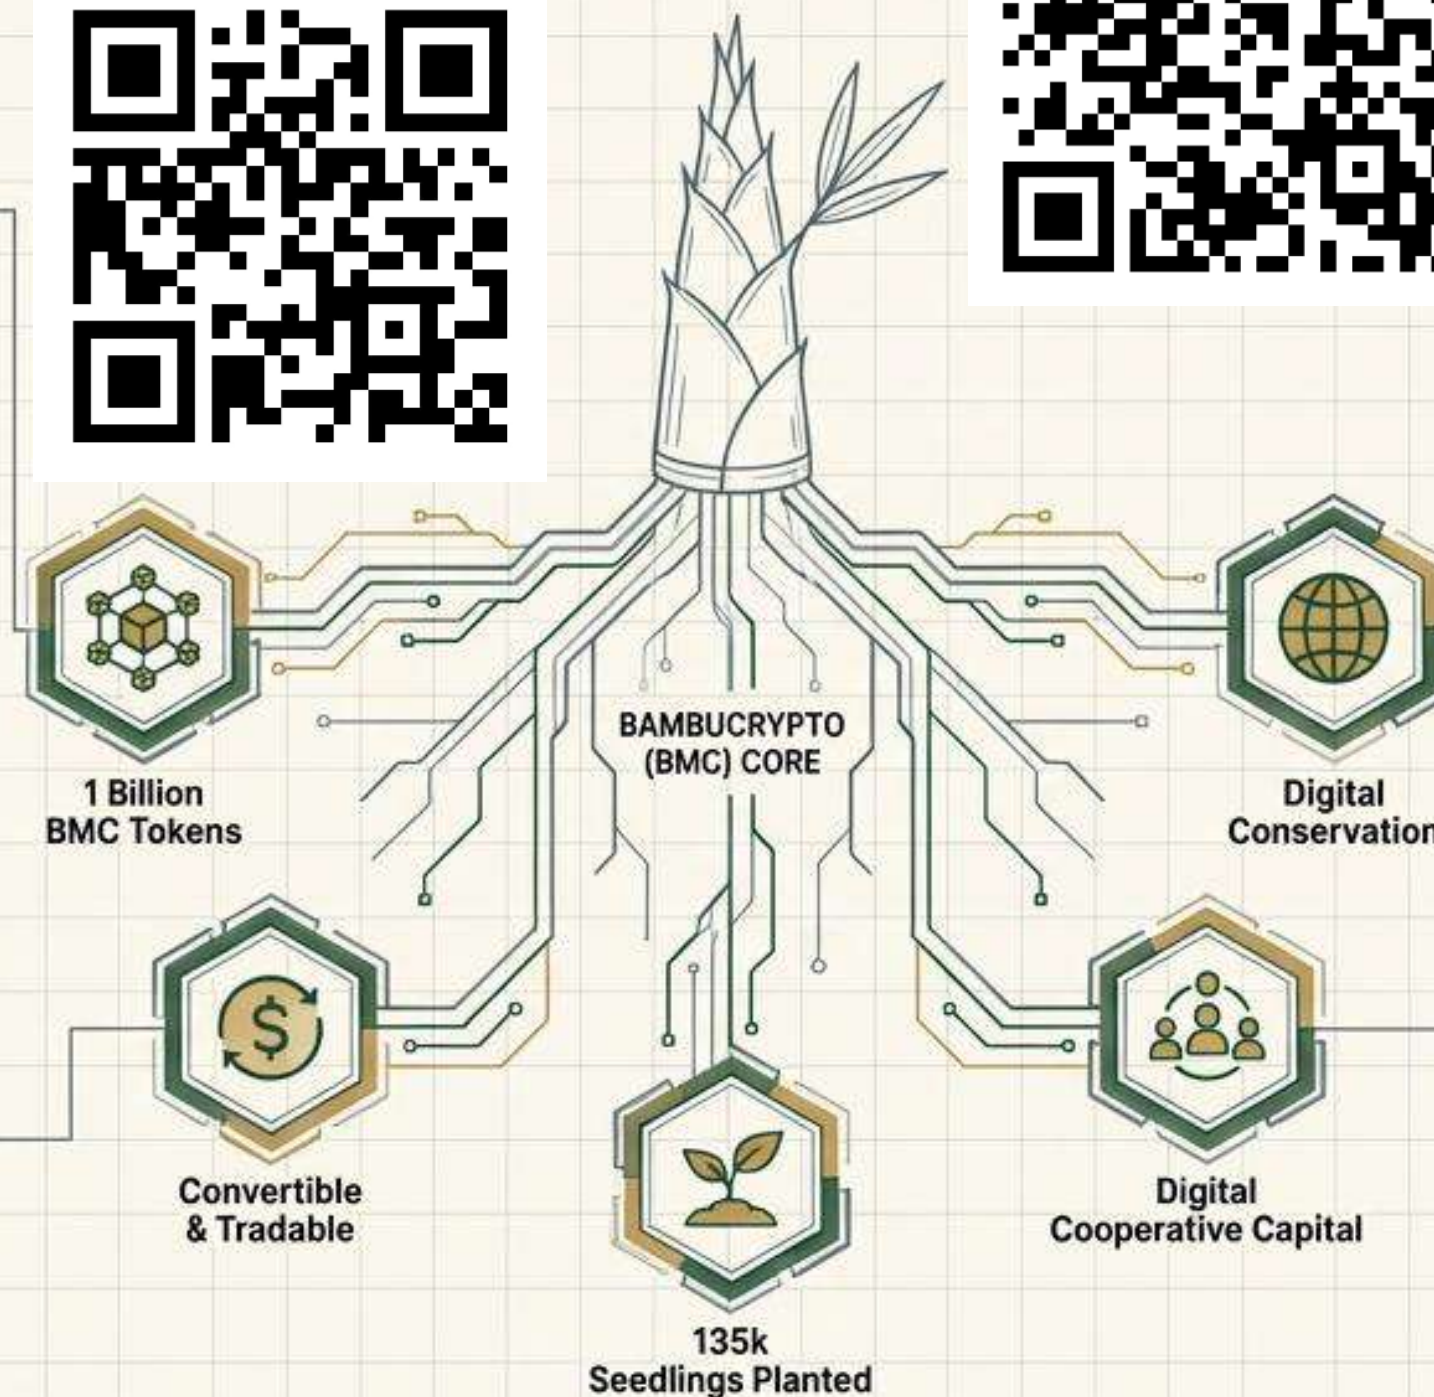

BAMBUCRYPTO supplies a total of 1,000,000,000 (one billion) BMC tokens, distributed as follows:

- 70% held and locked by the founders (BambuCrypto Team),
- 30% allocated for Private Sale, Pre-Sale, and Initial Coin Offering (ICO)

"WATER AND AIR FOR THE WORLD" PROGRAM

Planting Movement of 135,000 Bamboo Seedlings. This program is part of the digital planting initiative. The BMC team collaborates with landowners and local governments to plant bamboo seedlings on critical and potential lands during the rainy season.

Seed procurement is carried out by purchasing BMC tokens, which are then converted into bamboo seedlings.

DIGITAL CONSERVATION APPROACH

In the conservation domain, the BAMBUCRYPTO team builds a bamboo database and implements a "Digital Planting" program.

Data collected includes:

- bamboo species, number of clumps, number of culms, number of shoots, land ownership, farmers and cultivators, geographic coordinates, utilization, bamboo practitioners, artisans, industries, supporting infrastructure.

This database is built using blockchain-based information systems, where:

- 1 bamboo clump is converted into 1 BMC token.

UTILIZATION OF BMC

As a digital asset, BMC can be:

- converted into fiat currency and traded during ICO stages,
- used as donations to support bamboo practitioners,
- used to obtain discounts on Nusantara bamboo products (furniture, bicycles, houses, etc.),
- utilized as a "digital cooperative" to support business capital for bamboo entrepreneurs.

8. Akademi Bambu Nusantara (ABN) (2015 – ...)

About ABN

ABN is a learning space without limits of time and place. Within just two years (2017), ABN produced many practical and impactful innovations for bamboo preservation and utilization, including:
Creative Economy Market (PEKraf), Knockdown House System, Social Reconstruction Curriculum Model, Bamboo Nusantara Character (bambuNUSA), 2 animated films featuring bambuNUSA, bamvNUSA and ABN branding, bamboo-based applications, bamboo bicycles (D'Goes), bamboo educational tourism programs (webNUSA), Green Gold savings program, bamboo parks and global bamboo concepts, bamboo-based games, eco-preneur bamboo communities, bamboo nurseries and plantations, workshops, seminars, lectures, bamboo installations and crafts, Solo Bamboo Biennale, Millennial Bamboo Village concept (SABUMI), bamboo breakwaters and 5-layer bamboo fortification systems.

Additional Initiatives

- 

Development of Nusantara Bamboo Character
- 

1 Akademi Bambu Nusantara & Green Gold Bamboo Savings Program
- 

2 bambuNUSA Application
- 

3 bambuNUSA Application
- 

4 Bamboo Nursery Development
- 

5 Animated Films with Bamboo Nusantara Characters
